DIGITUS®

OUTDOOR IR
NETWORK CAMERA Series

User Manual

Please read instructions thoroughly before operation and retain it for future reference.

IMPORTANT SAFEGUARD

All lead-free products offered by the company comply with the requirements of the European law on the Restriction of Hazardous Substances (RoHS) directive, which means our manufacture processes and products are strictly "lead-free" and without the hazardous substances cited in the directive.

The crossed-out wheeled bin mark symbolizes that within the European Union the product must be collected separately at the product end-of-life. This applies to your product and any peripherals marked with this symbol. Do not dispose of these products as unsorted municipal waste. Contact your local dealer for procedures for recycling this equipment.

Disclaimer

We reserve the right to revise or remove any content in this manual at any time. We do not warrant or assume any legal liability or responsibility for the accuracy, completeness, or usefulness of this manual. The content of this manual is subject to change without notice.

Grounding

This is a Safety Class 1 Product (provided with a protective earthing ground incorporated in the power cord). The mains plug shall only be inserted in a socket outlet provided with a protective earth contact. Any interruption of the protective conductor inside or outside of the instrument is likely to make the instrument dangerous. Intentional interruption is prohibited.

Water & Moisture

Do not expose this product to dripping or splashing and that no objects filled with liquids, such as vases, shall be placed on the product.

Trademark Acknowledgements

Internet Explorer, Microsoft, Windows, Mozilla & QuickTime are registered trademarks of the respective holders.

MPEG4 Licensing

THIS PRODUCT IS LICENSED UNDER THE MPEG4 VISUAL PATENT PORTFOLIO LICENSE FOR THE PERSONAL AND NON-COMMERCIAL USE OF A CONSUMER FOR (i) ENCODING VIDEO IN COMPLIANCE WITH THE MPEG4 VISUAL STANDARD ("MPEG-4 VIDEO") AND/OR (ii) DECODING MPEG4 VIDEO THAT WAS ENCODED BY A CONSUMER ENGAGED IN A PERSONAL AND NON-COMMERCIAL ACTIVITY AND/OR WAS OBTAINED FROM A VIDEO PROVIDER LICENSED BY MPEG LA TO PROVIDE MPEG4 VIDEO. NO LICENSE IS GRANTED OR SHALL BE IMPLIED FOR ANY OTHER USE. ADDITIONAL INFORMATION INCLUDING THAT RELATING TO PROMOTIONAL INTERNAL AND COMMERCIAL USES AND LICENSING MAY BE OBTAINED FROM MPEG LA, LLC. SEE HTTP://WWW.MPEGLA.COM.

GPL Licensing

This product contains codes which are developed by Third-Party-Companies and which are subject to the GNU General Public License ("GPL") or the GNU Lesser Public License ("LGPL").

The GPL Code used in this product is released without warranty and is subject to the copyright of the corresponding author.

Further source codes which are subject to the GPL-licenses are available upon request.

We are pleased to provide our modifications to the Linux Kernel, as well as a few new commands, and some tools to get you into the code. The codes are provided on the FTP site, and please download them from the following site or you can refer to your distributor:

Version

Firmware: 1035-1014-1013-1004-A2
Video Viewer Software: 0139

TABLE OF CONTENTS
1. OVERVIEW

1.1 Product Features

- True Day & Night surveillance & large aperture lens (F1.4)
- The best cost / performance outdoor solution with IP67
- IR effective distance up to 40 meters with 56 IR LEDs
- Smart Light Control to avoid overexposure
- Excellent outdoor ID design with cable management
- Low-latency video streaming with H.264 compression format
- Free CMS software with E-Map for multiple devices control & surveillance
- Powerful mobile surveillance supporting iPhone, BlackBerry, WinCE & J2ME
- Motion detection and alarm notification functions
1.2 Package Content

☐ Network camera	☐ Installation Sticker
☐ Installation Guide	☐ RJ45 cable extender adapter
☐ CD-ROM disc (including user manuals & CMS software "Video Viewer")	

1.3 Dimensions

Unit: mm

1.4 Cable Overview

RJ45 network cable

RST — Reset wires
D_G — Power cable

CABLE	DESCRIPTION
RJ45 network cable	Connect it to the supplied RJ45 cable extender adapter for cable extension, and prepare another RJ45 network cable with suitable length for your connection.
Reset wires	Remove the insulating coating of these two wires, and twist them together to reset default. This will reset all parameters, including the IP address to factory default settings. **Note:** Disconnect power before twisting these two wires together, and connect to power again for reset default.
Power cable	Connect to DC12V power supply.

2. BEFORE USING YOUR NETWORK CAMERA

Before using the network camera, make sure:

1) You have installed the supplied CMS software, "Video Viewer".
2) You have configured the network settings, and the network connection is fine.

If not, please refer to your the installation guide.

This network camera can be accessed via our supplied CMS software "Video Viewer", or the web browser "Microsoft Internet Explorer" or "Mozilla Firefox" depending on different using situations.

■ To check or configure up to 16 surveillance devices simultaneously with the record function, please use "Video Viewer".
For details about using Video Viewer, please refer to "3. ACCESSING THE CAMERA VIA VIDEO VIEWER" at page 3, and "4. SYSTEM CONFIGURATION" at page 11.

■ To check or configure this network camera only, it's recommended to use the web browser "Microsoft Internet Explorer" or "Mozilla Firefox".
For details about using the web browser, please refer to "5. ACCESSING THE CAMERA VIA YOUR WEB BROWSER" at page 21.
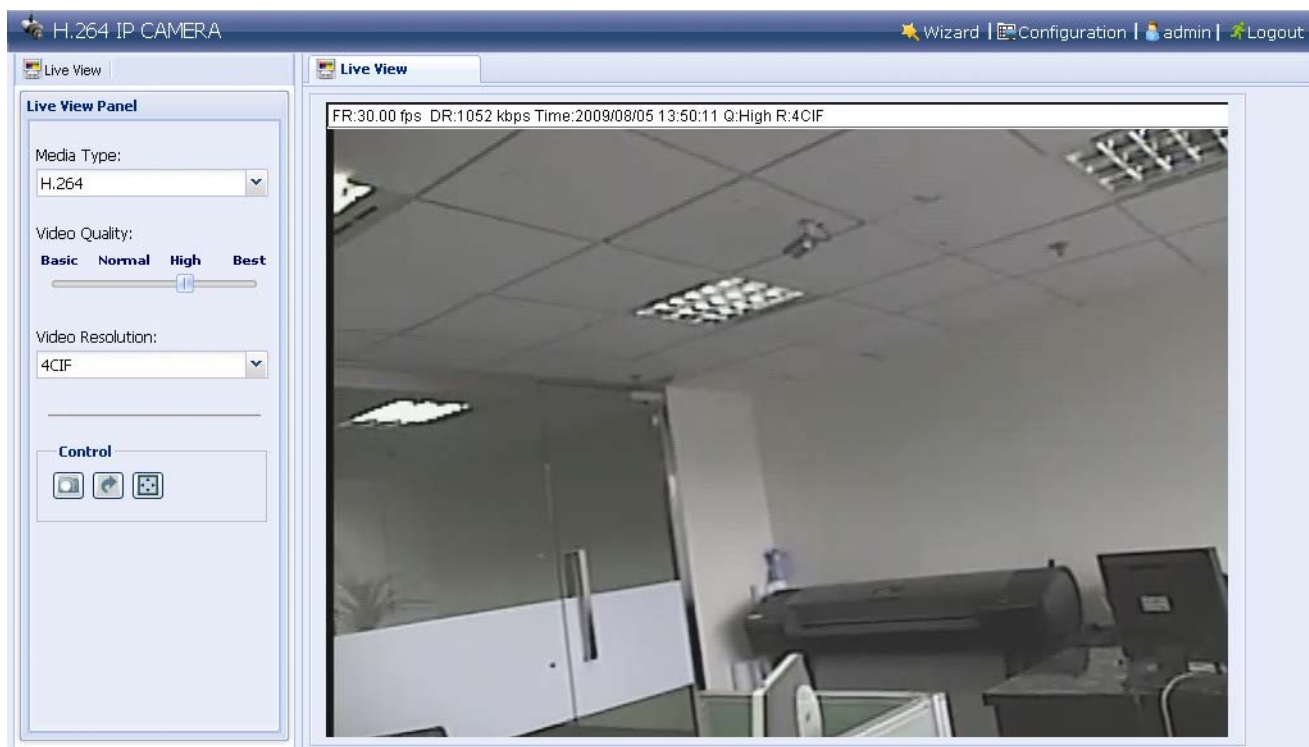

3. ACCESSING THE CAMERA VIA VIDEO VIEWER

3.1 Accessing the camera

Step1: Double-click " " on your PC desktop to open Video Viewer. By defaults, the "Address Book" panel will be displayed on the right side of the control panel.
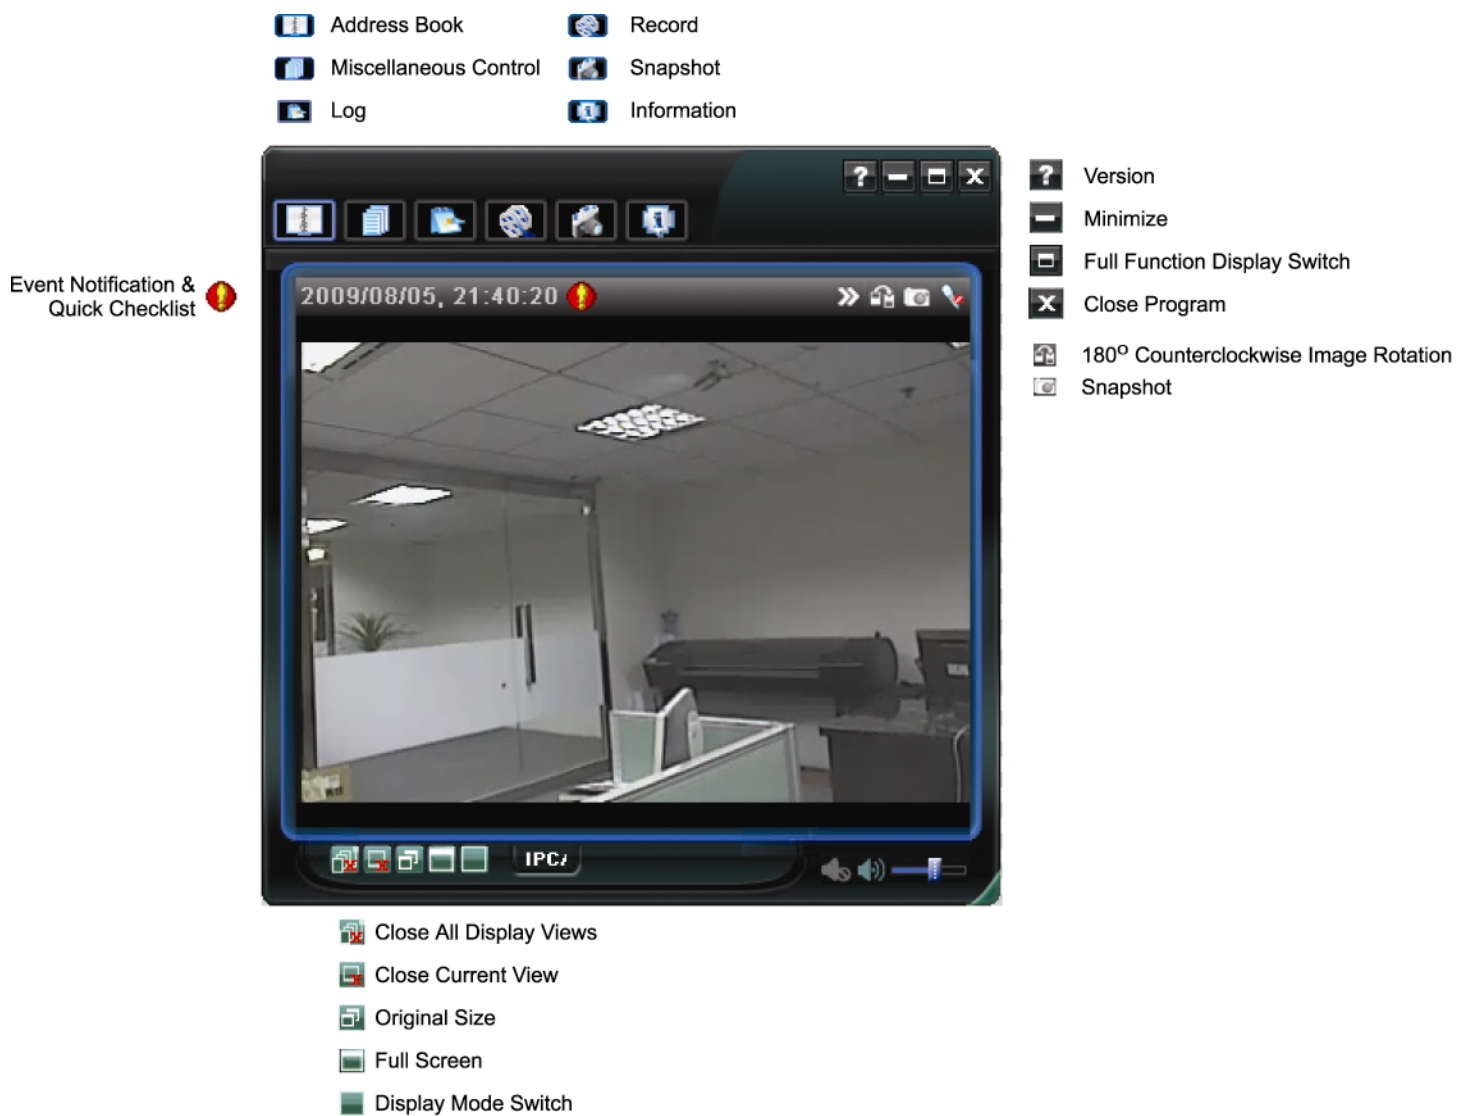

Step2: Click " " to select the IP address of the camera you intend to connect, and double-click it.
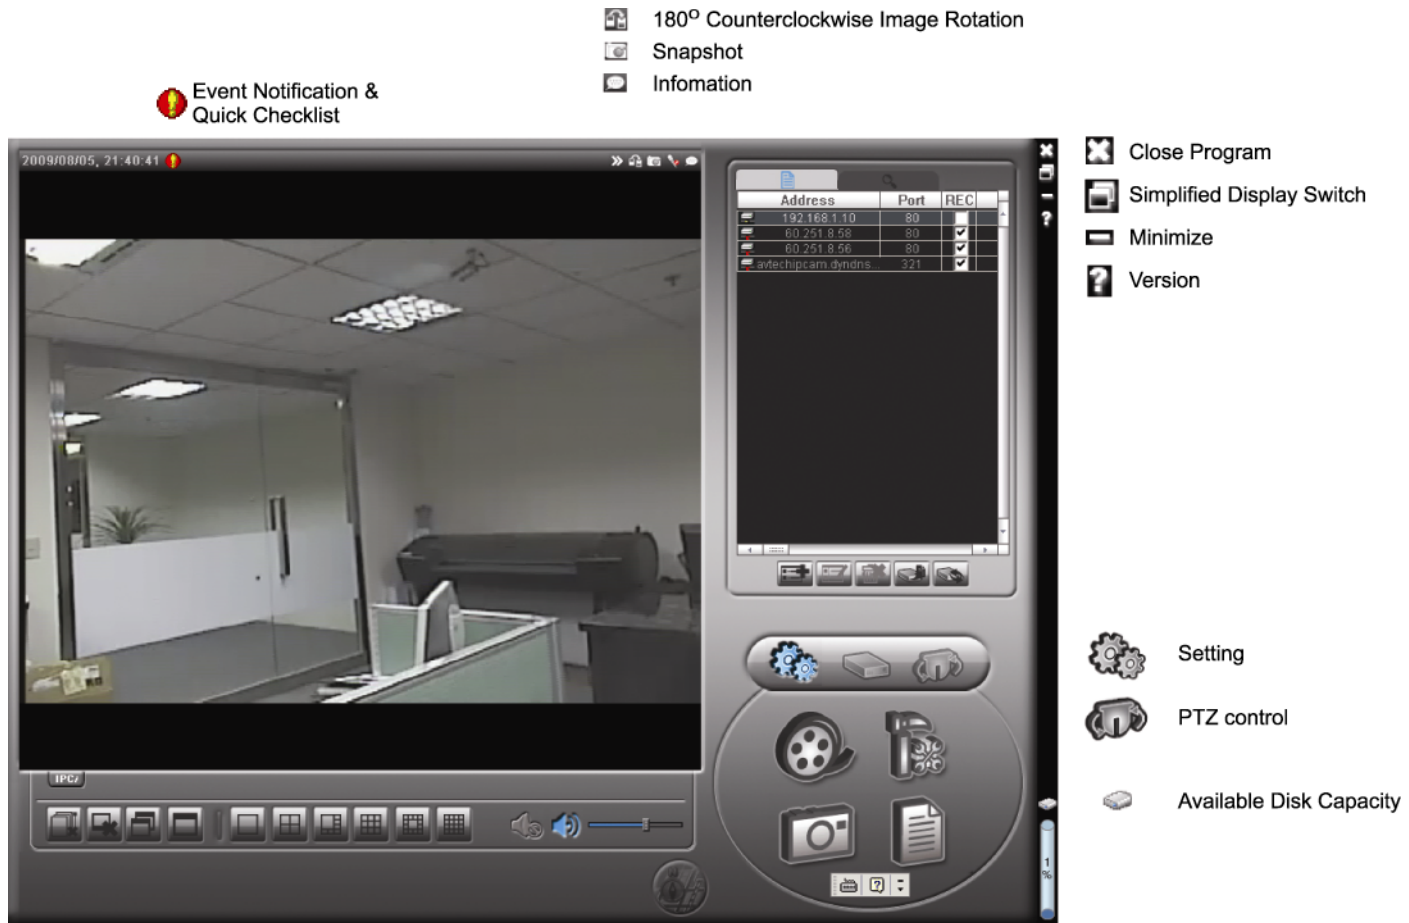

Step3: The live view is displayed in the Video Viewer.

3.2 Control panel overview

Two control panels are available and can be switched depending on your using habit.

3.2.1 Simplified Version (Default)

3.2.2 Full Function Version

3.2.3 Main Button Overview

Button		Function	Description		
Simplified	**Full Function**				
[icon]	[icon]	Address Book	Click to show the predefined IP address(es). You can add, remove or search the IP address to log in the DVR remotely.		
[icon]	[icon]	Miscellaneous Control	[icon]	Remote Config	Click to go to the detailed system configuration. For details, please refer to "4. SYSTEM CONFIGURATION" at page 11.
			[icon]	Record Setting	Click to go to the detailed record setting. For details, please refer to "3.3.1 Record" at page 5.
			[icon]	Custom Setting	Click to choose the language of this program, or set the password when activating this program. The changes will take effect when this program is closed and executed again.
[icon]	[icon]	Log	Click to view all event and recording logs, search the desired log(s) by date, or playback the recording of the selected log.		
[icon] / [icon]	[icon] / [icon]	Record / Record Stop	Click to start / stop the manual recording. The record button will be disabled when the reserved disk capacity set in "Record Setting" is larger than the current disk capacity. For details, please refer to "3.3.1 Record" at page 5.		
[icon]	[icon]	Snapshot	Click to take a snapshot of the current view. The snapshot will be saved in the path you specified in "Record Setting".		
[icon]	[icon]	Information	Click to show the current network connection details.		

4

3.3 Frequently-used functions

3.3.1 Record

To record remotely, click "" or " → "" to go to the "Record Setting" page.
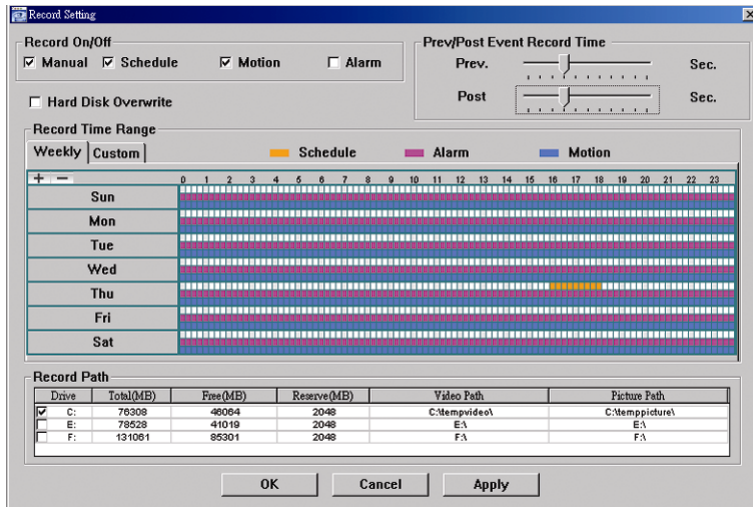

In the "Record Setting" page, you can set the following items:

 ・ Record type
 ・ Pre- / post-event record time (0~10 seconds)
 ・ Record time setting
 ・ Record path

Note: The record function will be disabled when the reserved disk capacity in "Reserved(MB)" is larger than the current disk capacity in "Free(MB)".

When "Manual" is checked, click "" or "" on the main control panel to start the manual recording immediately, and the recordings will be saved in the location specified in "Record Path".

When "Motion" and / or "Alarm" are checked, the recording function will be enabled for any motion or alarm event, and the recordings will be saved in the location specified in "Record Path".

3.3.2 Playback

To play a recording, click "" or "", and select the "Record" tab. A list of all the recordings will be shown by defaults, and you can also sort out the logs you want to speed up the search time.
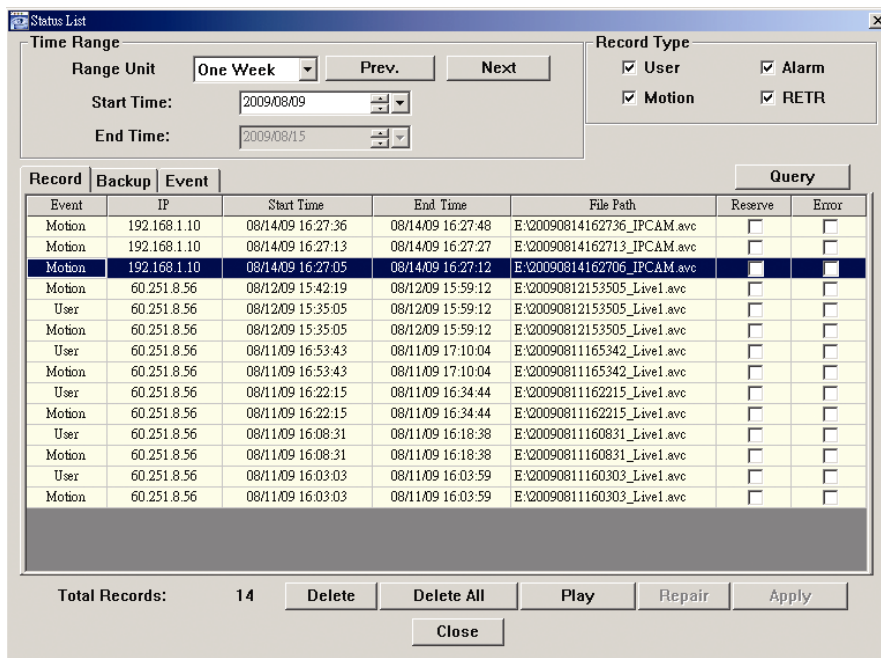

3.3.3 Firmware Upgrade

This function is used when users need to upgrade the network camera for function scalability.
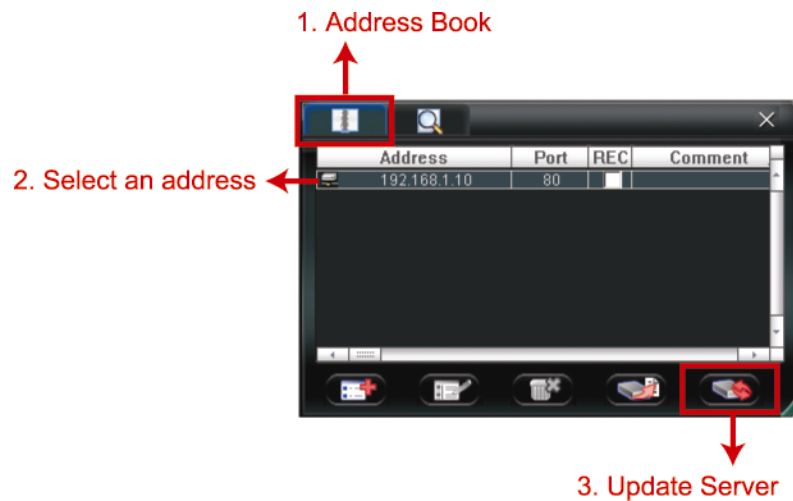

Note: Before using this function, make sure you have the correct upgrade files provided by your installer or distributor.
Step1: Click "⬛", and select the IP address of your network camera in the address book.

Step2: Click "🔴" to show the upgrade page, "Update Server".

1. Address Book

2. Select an address

3. Update Server

Step3: Click "Add" to browse to the upgrade files.

Step4: Click "Upgrade Firmware" to start firmware upgrade.

Note: It takes a few minutes to finish the upgrade process. Do not disconnect the power during firmware upgrade, or the upgrade may be failed. The camera will reboot after the upgrade.

Step5: Select the IP address of the camera and click "🔴" again to check if the firmware is upgraded.

3.3.4 E-Map

Video Viewer is also a Central Management System (CMS) software, which allows network device control & management for up to 16 devices simultaneously.

Note: Before using this function, make sure Video Viewer is connected to all the devices (up to 16) you want to monitor.

E-Map is **ONLY** available when the control panel is switch to the full function version.

<u>How to Add an E-Map Group</u>

STEP1: In the simplified version, click "⬛" to switch the control panel to the full function version, and click "⬤" to enter the E-Map page as follows.

Note: To know where the buttons are, please refer to "3.2.1 Simplified Version (Default)3 at page 3, and "3.2.2 Full Function Version" at page 4.

STEP2: Right-click to show the shortcut menu on the top-left panel, and select the E-Map group you want to add. There are three E-Map groups you can add: Google E-MAP, Single E-MAP, and Building E-MAP.

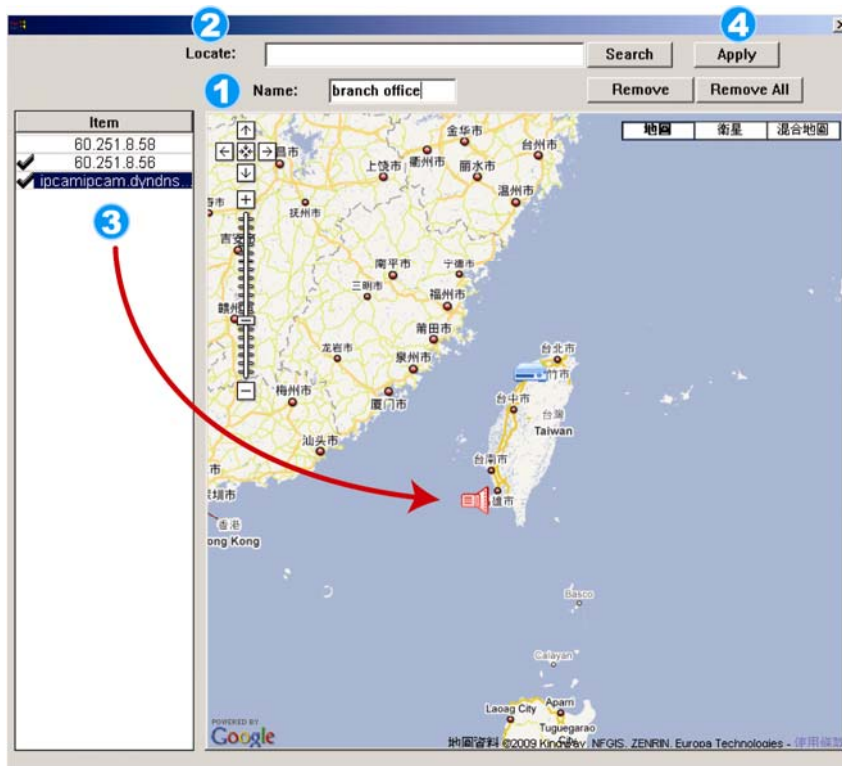

How to add a Google E-Map group:

1 Enter the name of this Google E-Map group.

2 Enter a specific address or landmark, and click "Search".

OR

Move to the map and drag to the location you want.

3 Click and drag the IP address to where it's located in the current level.

4 Click "Apply" to save and finish.
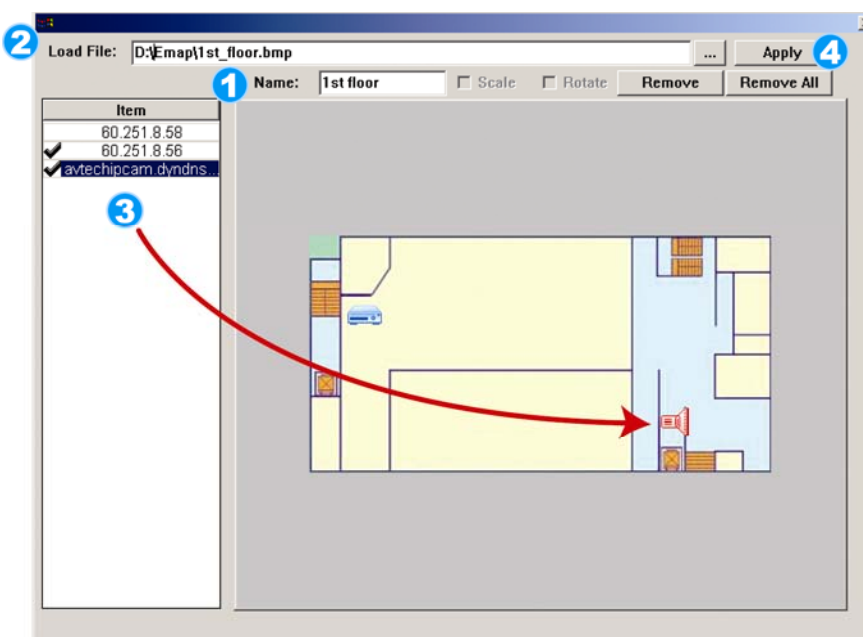

How to add a single E-Map group:

1 Enter the name of this single E-Map group.

2 Click "..." to browse the map file in BMP or JPEG.

3 Click and drag the IP address to where it's located in the current level.

4 Click "Apply" to save and finish.
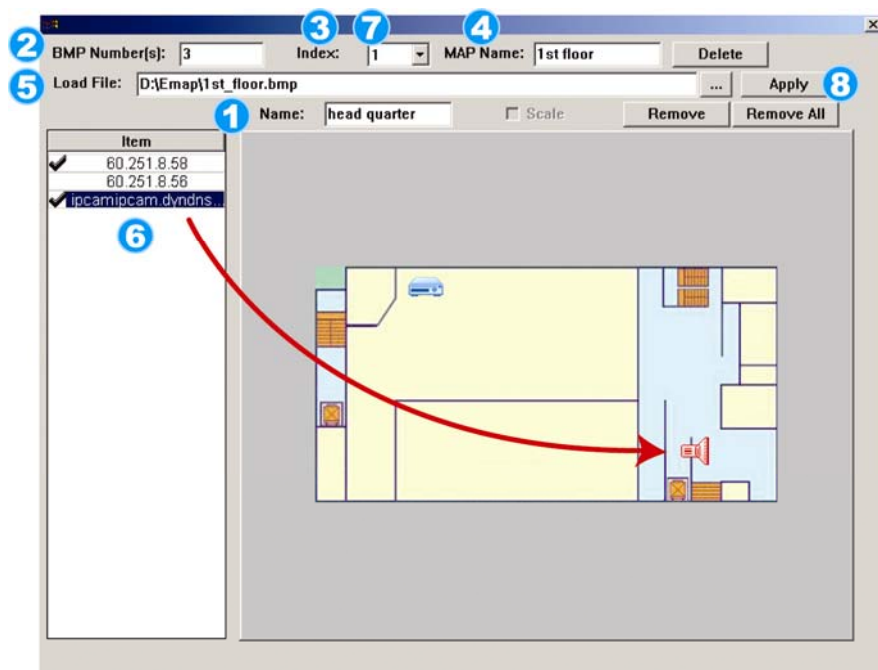

How to add a building E-Map group:

1. Enter the name of this building E-Map group.
2. Enter the total levels of this building.
3. Select the level of the building from the drop-down list.
4. Enter the name of the level.
5. Click "..." to browse the map file in BMP or JPEG.
6. Click and drag the IP address to where it's located in the current level.
7. Go back to STEP 3 to select other level of the building, and repeat from STEP 3 to 6 until the setup for all levels are finished.
8. Click "Apply" to save and finish.

STEP3: When the E-Map group is created, you will see the tree on the top-left panel, showing all the devices you've added to this group.

Icon	Description
	The connected device is camera. When it's selected, it will become red.
	The connected device is DVR. When it's selected, it will become red.
	For any motion or alarm event, it will appear on the screen to catch your attention. To know what's happening quickly, double-click the device icon on the E-Map to show the live view.

How to Edit / Remove an Existing E-Map Group

➢ For Google E-Map Group

Right-click on the group name to show the shortcut menu list, and select "Edit E-MAP" or "Remove E-MAP" as needed.

You can also add a single E-Map group (Add Single E-MAP) or Building E-Map group (Add Building E-MAP) into the existing Google E-Map group.
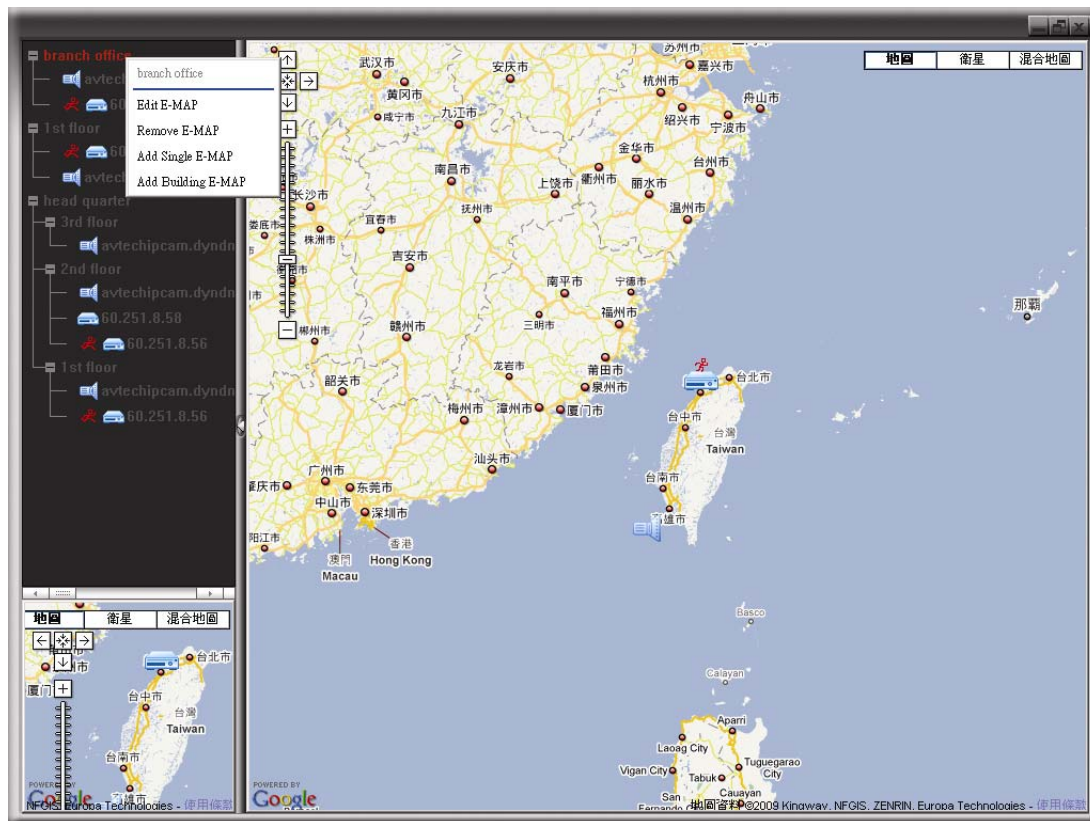

➢ For Single E-Map Group

Right-click on the group name to show the shortcut menu list, and select "Edit E-MAP" or "Remove E-MAP" as needed.

➢ For Building E-Map Group

Right-click on the group name to show the shortcut menu list, and select "Edit Building E-MAP" or "Remove E-MAP" as needed.

4. SYSTEM CONFIGURATION

Before using the network camera, make sure you have installed the supplied software, "Video Viewer", and configure network settings. If not, please refer to your installer or the installation guide.
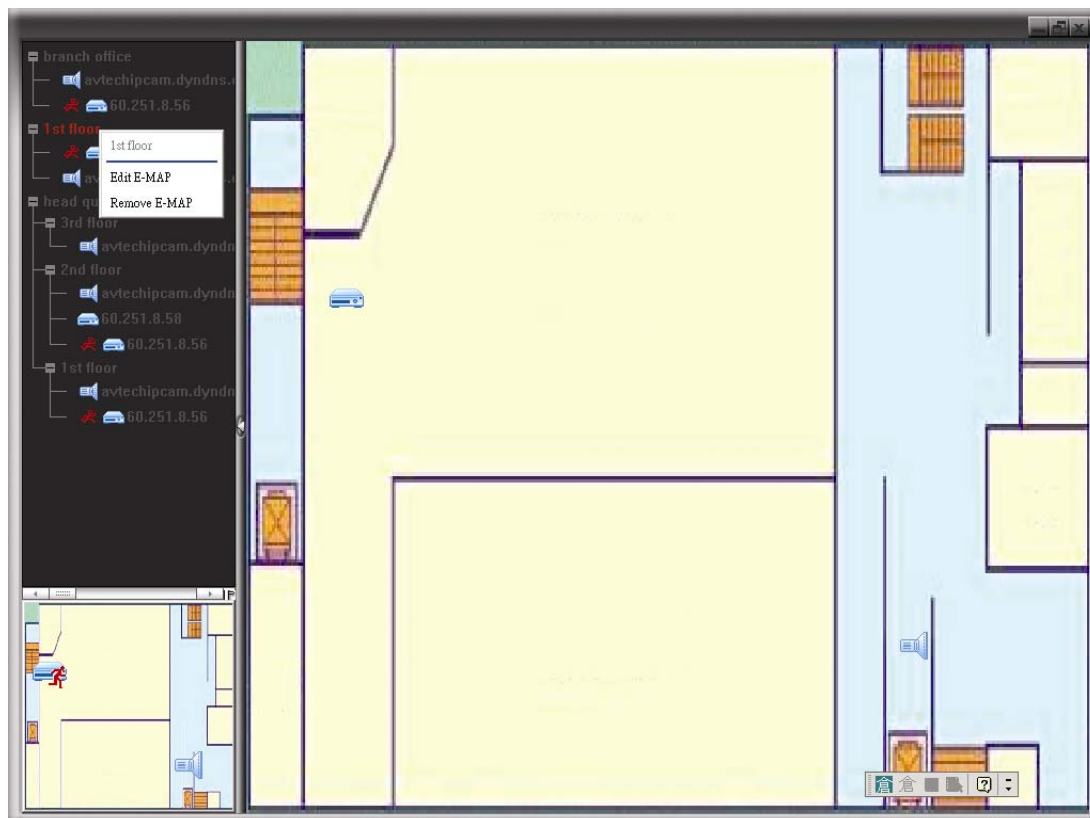

Note: It's recommended to consult with your installer before changing system configurations.

Note: You need to be the supervisor to enter the system configuration page. If not, please re-log into the camera with the supervisor user level.

Click "▨" and select "A" to enter the system configuration page. All the system configurations are listed as a tree structure on the left panel as follows.

Main Menu	Sub-menu	What you can do for this function?
General		1. Check the firmware version & MAC address of the camera. 2. Change the camera title.
	Log	Check the system event logs.
	Account	1. Create a new user account with different access privilege. 2. Modify or delete an existing user account.
	OnLineUser	Check the current online user(s).
	Trigger	1. Enable / disable the motion detection. 2. Set the motion detection area. 3. Select the event notification method.
Network		Configure network settings.
	QoS	Limit the data flow for live streaming.
	DDNS	Enter DDNS information when the network type is PPPOE or DHCP.
	SNTP	Synchronize your camera time with the networked computer systems.
	FTP	Enter the FTP information for event notifications when "FTP" is chosen in "General" → "Trigger".
	MAIL	Enter Email information for event notifications when "Email" is chosen in "General" → "Trigger".
	Filter	Choose to permit or block the IP address(es) which can access this camera.
	UPnP	Allow this camera to be detected among devices within the same network area for easy and quick usage.
Video		Set the image resolution, quality and frame rate.
Camera		Adjust the camera parameters if necessary.
	Color	Adjust the color performance.
	Time	Set daylight saving time and the current time.

4.1 General

In "General", you can check the general information for your network camera, such as the firmware version and MAC address, and also modify the identification name of your camera (up to 15 alphanumeric characters).
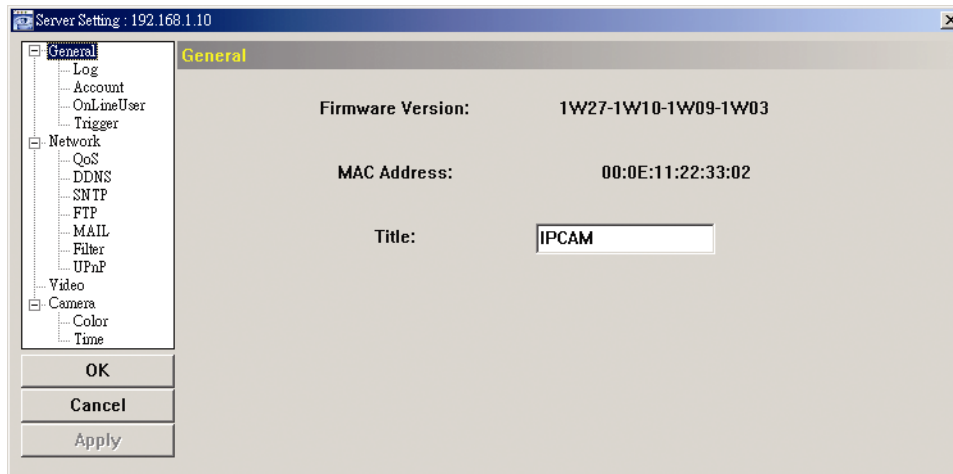

4.1.1 Log

To quickly search the system log you want by event type, click the drop-down list to select the system log type you want to check, and click "Reload" to refresh the list.

To clear all system event logs, click "Clear".
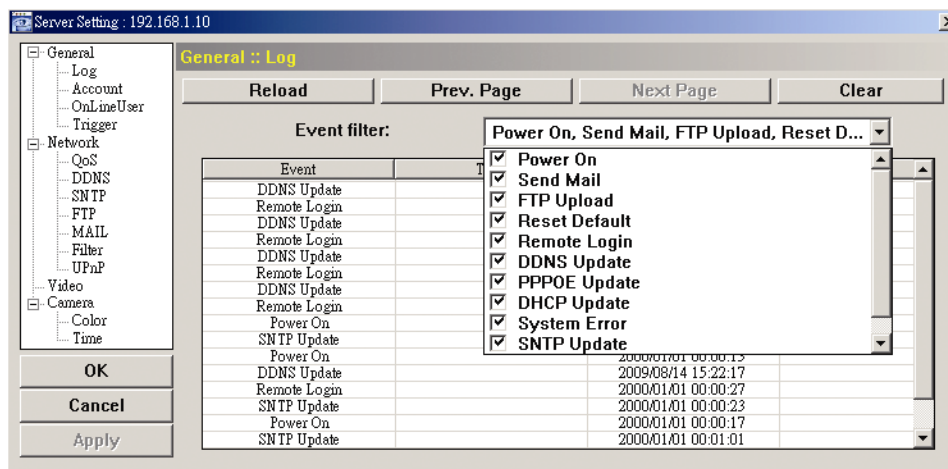

4.1.2 Account

You can create a new account with different user access privilege, or delete or modify an existing account setting.

How to create a new account

Step1: Click "New", and fill in the following columns.

| Column	Description
User Name	Set a user name that will be used for camera access. The user name allows up to 16 alphanumeric characters.
Password	Set the password that will be used for remote login. The password allows up to 16 alphanumeric characters.
User Level	Set the security level of an account to give the permission to control different functions. There are four user levels: Supervisor, Power User, Normal User and Guest.
Life Time	Select how long this account is allowed to stay online (1 MIN / 5 MIN / 10 MIN / 1 HOUR / 1 DAY / INFINITE)

Step2: Then, click "Apply" to save your setting and create a new account.

How to modify or delete an existing account

Step1: Select the account you want to modify or delete.

Step2: To modify the account, change the setting directly, and click "Apply".
　　　　To remove the account, click "Delete".

Note: It's not allowed to remove an account when there's only one account in the account list.

4.1.3 OnLineUser

You can check the current online user(s) with respective online information. To refresh the list, click "Refresh".

4.1.4 Trigger

You can set the motion or alarm detection and select the notification function.
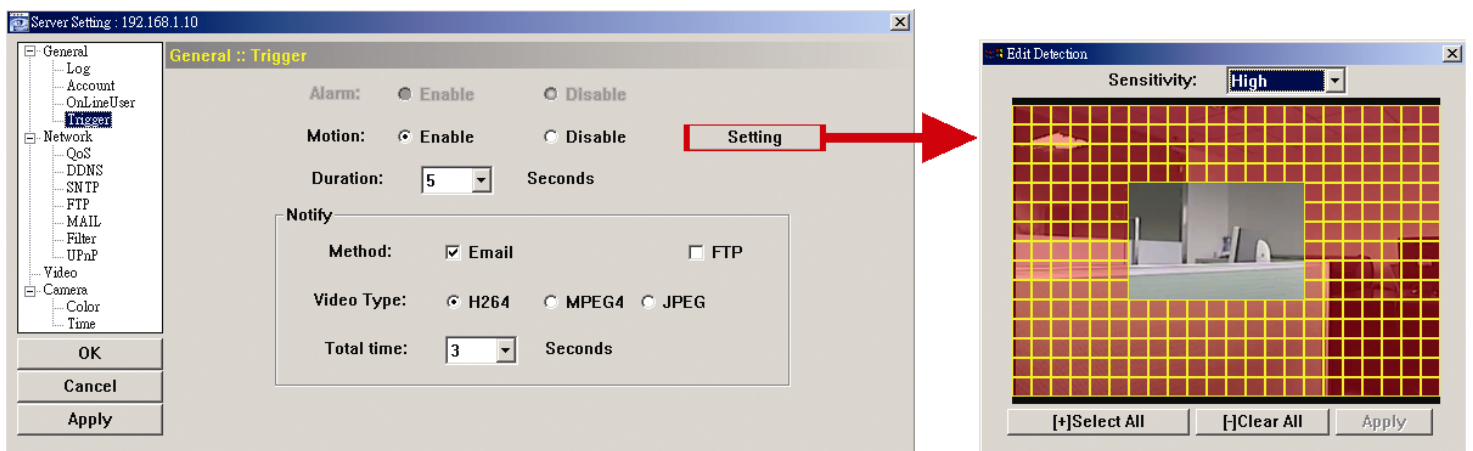

◆ Trigger Setting

In this section, you can select to enable or disable the alarm or motion detection.

Item	Description
Motion	Select to enable or disable the motion detection function.
	·Motion Detection Area Setting When "Enable" is selected, click "Setting" to enter the motion detection area setting page as follows: **Sensitivity:** Set the detection sensitivity (High / Normal / Low). **Area Setting:** Set the motion detection area by selecting the area grids with your mouse. Pink grids represent the area that is not being detected while the transparent grids are the area under detection. You can set multiple areas under detection. Click "−" (Clear All) to set the whole area undetected. Click "＋" (Select All) to set the whole area under detection.
Duration	Set the duration time for trigger recording (5 / 10 / 20 / 40 seconds).

◆ Notification Setting

In this section, you can select to enable e-mail and/or FTP notification when an alarm or a motion happened.

Item	Description
Method	• **Email** When this option is checked, the network camera will upload the captured video clip to the assigned e-mail address(s) once motion or alarm recording happened. • **FTP** When this option is checked, the network camera will upload the captured video clip to the specified FTP site once motion or alarm recording happened.
Video Type	Select the file type of the notification files: H264 (video) / MPEG4 (video) / JPEG (image).
Total	Set the record time of the notification video clip (1 ~ 5 seconds).

4.2 Network

You can set the network configuration of the network camera depending on your network type. For details, please refer to your installation guide.
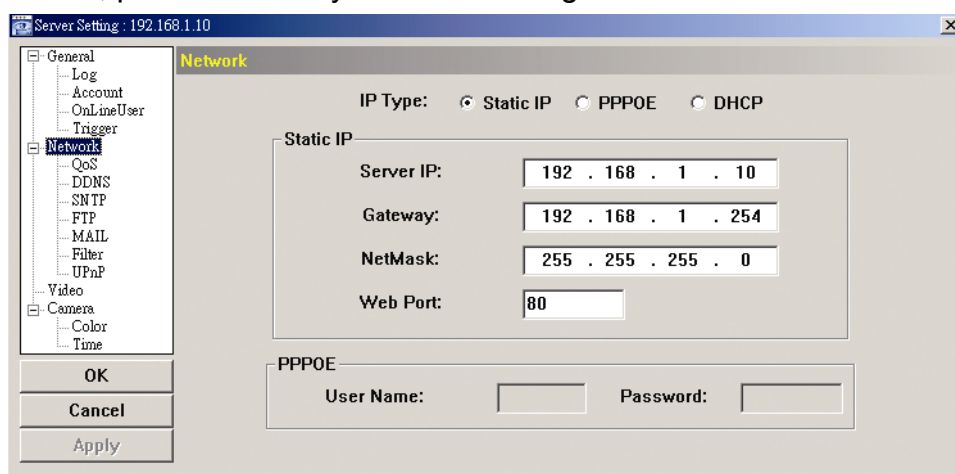

4.2.1 QoS

QoS, Quality of Service, is the ability to control the data flow for real-time streaming. This function is important if your network bandwidth is insufficient and you have other devices to share the network bandwidth.

Check "QoS Enable", and set the max. upload rate from 256 to 10240 kbps.
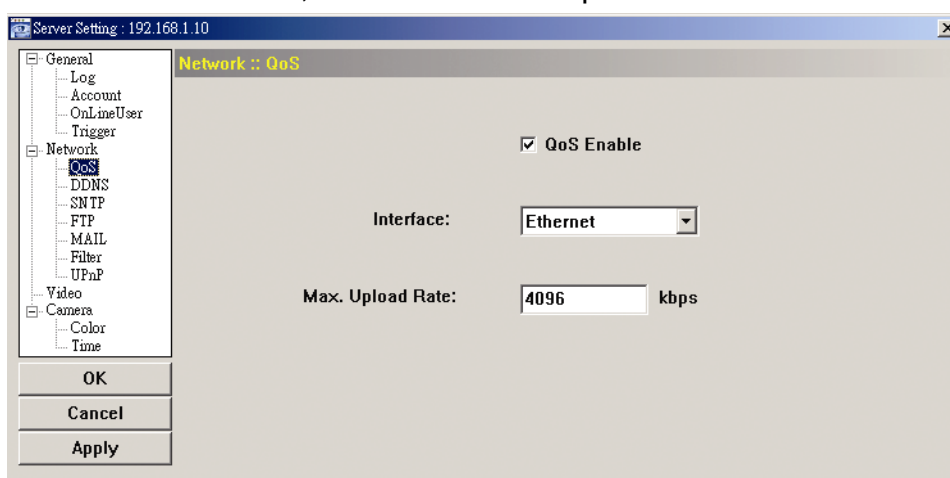

4.2.2 DDNS

Select "On" when the selected network type in "Network" is "PPPOE" or "DHCP". For details, please refer to the installation guide.
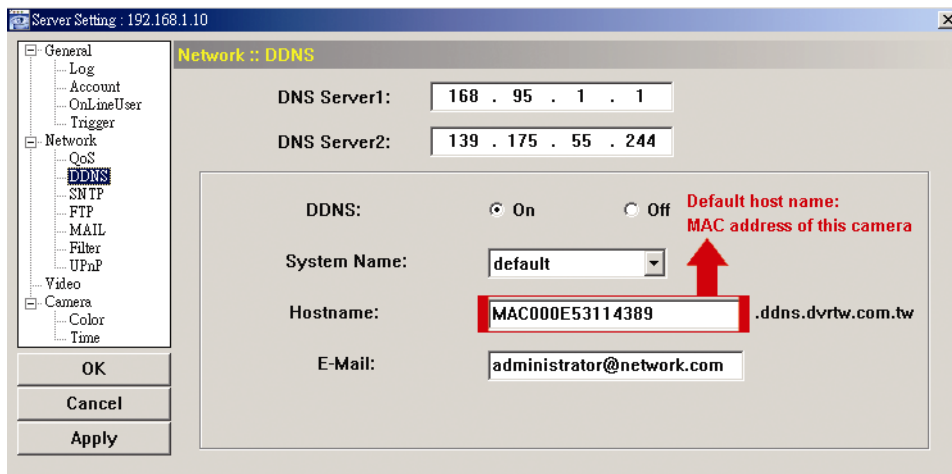

4.2.3 SNTP

SNTP (Simple Network Time Protocol) is used to synchronize your camera time with the networked computer systems.

| Function	Description
GMT (Greenwich Mean Time)	Once users choose the time zone, the network camera will adjust the local area time of the system automatically.
Server Name	Simply use the default SNTP server (For example, tock.stdtime.gov.tw) or change to another server with which users are familiar.
Sync. Period	Select "Daily" to synchronize the camera time with the network time every day or "None" to turn off this function.
Sync Server Time	Click and the network camera will synchronize the time with the network time.

4.2.4 FTP

Enter the detailed FTP information and click "Apply" to confirm. The information you set here will be applied when "FTP" is selected in "General" → "Trigger".
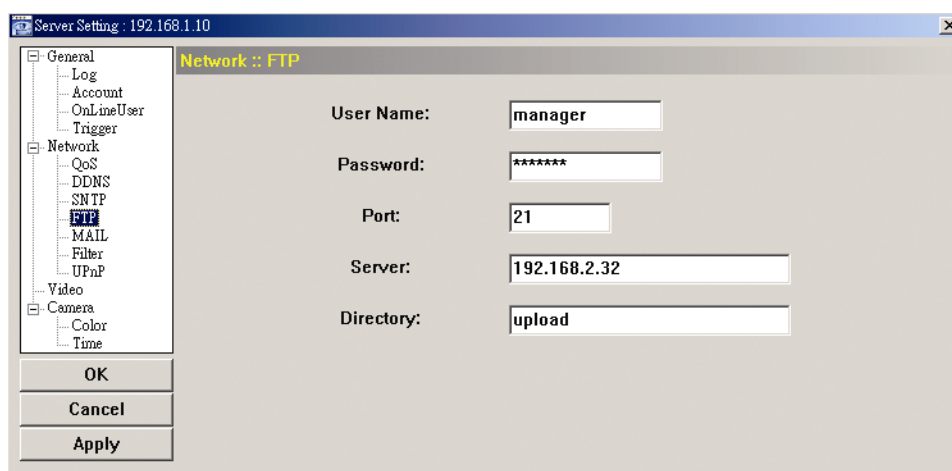

4.2.5 MAIL

Enter the detailed e-mail information and click "Apply" to confirm. The information you set here will be applied when "Email" is selected in "General" → "Trigger".

| Function	Description
Server	Enter the SMTP server address provided from your e-mail system supplier.
Port	Enter the port number provided from your e-mail system supplier. If this column is left blank, the e-mail server will use port 25 to send e-mails.
Mail From	Enter the entire mail address to ensure e-mails will not be blocked by SMTP.
SSL Encryption	Select "Yes" if your e-mail server is using SSL encryption to protect your e-mail content from unauthorized access.
Verify Password	Some mail servers are required to verify the password. Please enter the "user name" and "password".
Email Address	Add the e-mail address(s) of the assigned recipient(s).

4.2.6 Filter

Choose to permit or block the IP address(es) which can access this camera.

Function	Description
Error Login Count	Set the maximum count for login failure. When the maximum count is reached, the IP address trying to access the network camera will be locked.
Error Lock Time	Set the lock time in minutes when the maximum count of error login for an IP address is reached.
Echo Request	Select "Non-Block" to allow other users to use the ping command to detect the IP address of your network camera, or "Block" to deny the ping command request.
Filter	Choose to enable (YES) or disable (NO) the filter function.
	If "YES" is selected, choose whether you want to permit (Allow) or block (Deny) the IP address list below.
	• To add an item to the IP address list, key in the IP address in "IP Address", and click "Add". • To remove an existing item in the IP address list, click the item you want to remove, and click "Delete".
Apply	Click "Apply" on the bottom right corner when any change is made in this menu, or the change will not be recorded in the system.

4.2.7 UPnP

"UPnP" stands for "Universal Plug and Play", which allows devices to connect seamlessly in the home and corporate environments and simplify installation of computer components.

Check "Enable UPnP" to allow the network camera to be detected among devices within the same network area, and set the identification name of the camera in "Friendly name".
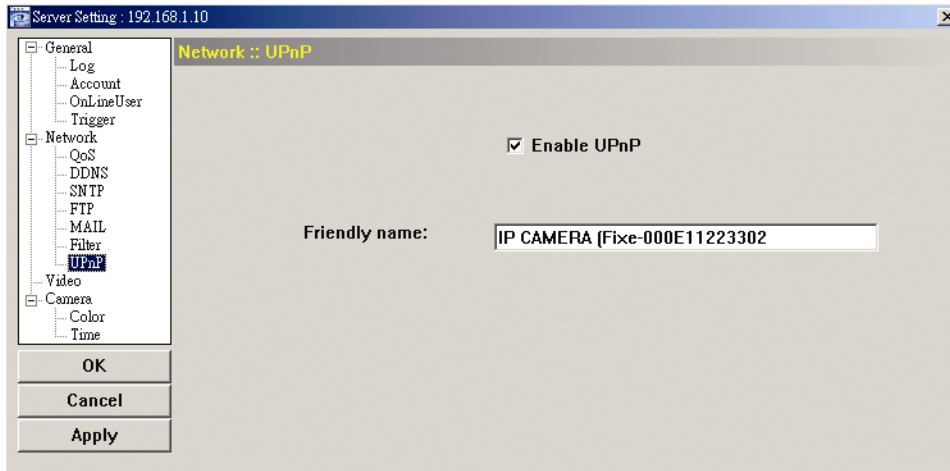

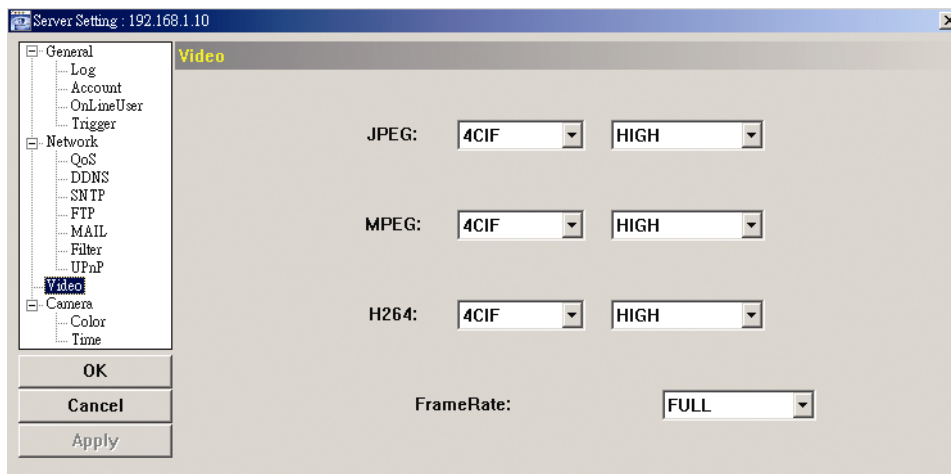

When this function is activated, the other PC within the same domain as this camera will be able to search this camera in "Network Neighbor" with the identification name set in "Friendly name". Double-click it to quickly open the web browser for camera access.

For details about camera access via your web browser, please refer to "5. ACCESSING THE CAMERA VIA YOUR WEB BROWSER" at page 21.
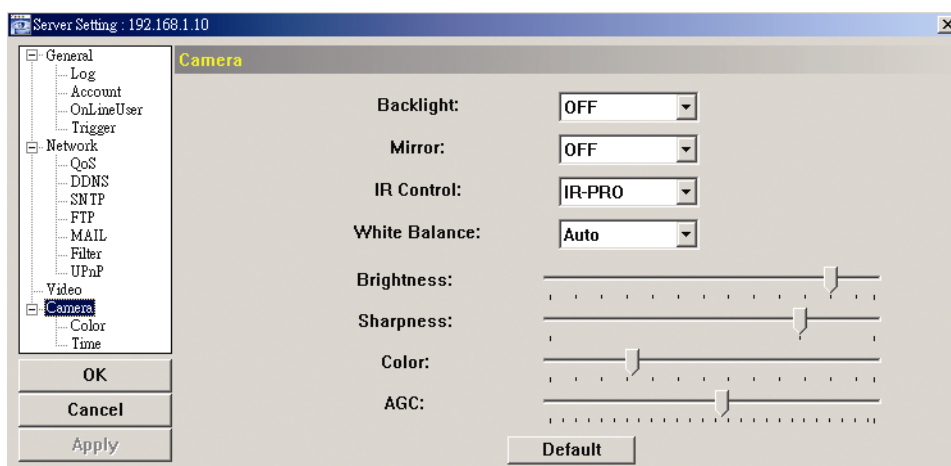

4.3 Video

Set the image resolution, quality and frame rate.

Item	Description
JPEG / MPEG / H264	Select the image resolution and quality. Image Resolution: CIF / 4CIF Image Quality: BEST / HIGH / NORMAL / LOW
Frame Rate	The frame rate allowed to each viewer can be adjusted to adapt to the bandwidth on the network. Set the desired image frequency to the maximum (FULL) or to a specified frame rate (1/2; 1/3; 1/4; 1/5; 1/10; 1/15; 1/20; 1/25; 1/30). The actual frame rate depends on the actual network connection, and may be lower than the specified one.

4.4 Camera

Adjust the camera parameters if necessary.

Note: To preview the changes, click "Apply".

| Item	Description
Backlight	It is the function to adjust the image to compensate for an area that is overpowered by brightness because of excessive light. The image will be properly exposed for clearness. Select to activate (ON) or disable (OFF) this function. Note: This function is available only in the day mode.
Mirror	Mirror is used when you want to rotate the images horizontally based on your installation situation. The options are: ON / OFF.
IR Control	Select "IR PRO" to smartly activate the IR LEDs when needed, "Always On" to always activate the IR LEDs, or "Always Off" to deactivate the IR LEDs.
White Balance	The white balance function processes the current image to retain color balance over a color temperature range. According to different color temperatures and installation situations, set the white balance function to the suitable mode. The options are: Auto / AWB1 / AWB2 / AWB3.
Brightness	Brightness helps to adjust the bright level of image based on different light conditions. Click and drag the slider to adjust the brightness. The value is from 0~127. The larger the value, the brighter the image.
Sharpness	Sharpness enhances the clarity of image detail by adjusting the aperture and sharpening the edges in the pictures. Click and drag the slider to adjust the sharpness. The value is from 2~15. The larger the value, the sharper the image.
Color	Color helps to adjust the color level of image through the camera. Click and drag the slider to adjust the color level. The value is from 0~127. The larger the value, the thicker the image.
AGC	It is a function to adjust the amplitude of the signal input according to different light conditions. Click and drag the slider to adjust the amplitude of the signal input. The value is from 0~255. The larger the value is, the more the signal noise will be.
Default	Click to restore all changes to default values.

4.4.1 Color

Adjust the color performance from Brightness, Contract, Hue and Saturation. Click and drag the slider to preview the color change on the live view panel and adjust the image color. Then, click "Apply" to confirm the change.

To restore the default values, click "Default", and click "Apply" to confirm the change.
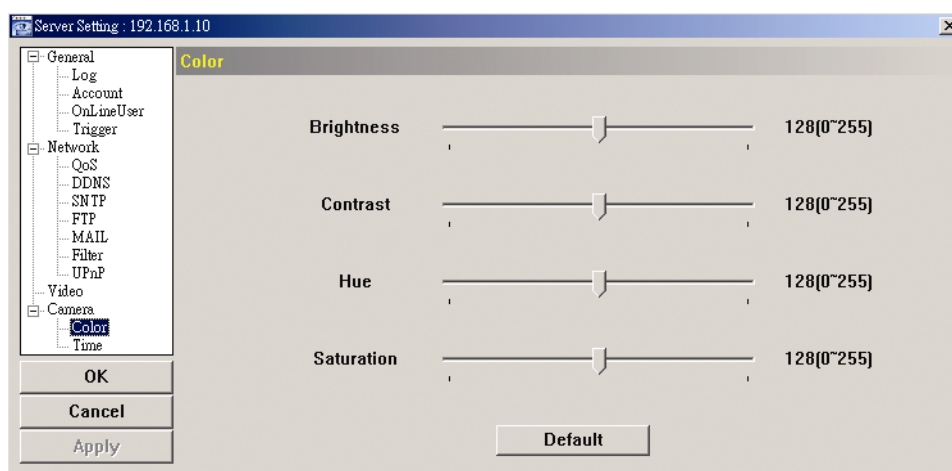

4.4.2 Time

Set daylight saving time and the current time.

Function	Description
Daylight Saving	Specify whether to use daylight saving time (ON / OFF). If this function is enabled, set the time period (START / END), and adjust the daylight saving time in hours (ADJUST).
Time	Set the current time.

Users can also access the network camera via a web browser, such as Microsoft Internet Explorer or Mozilla Firefox.

However, the web browser is only available for single device access. If users want to access more than two devices through one interface, it's recommended to use our supplied CMS software, Video Viewer. For details, please refer to "3. ACCESSING THE CAMERA VIA VIDEO VIEWER" at page 3.

Before using the network camera, make sure you have configured the network settings and have the IP address, user name and password used for accessing the camera in hand. If not, please refer to the installation guide.

## 5.1 Accessing the camera

Step1: Open your web browser, and key in http://*ipaddress:portnum* in the URL address box.

> For example, for IP address 60.121.46.236 and port No. 888, please key in "http://60.121.46.236:888" into the URL address box, and press "Enter".

Step2: In the login page, key in the user name and password, and enter the security code from the image below. Then, click "LOGIN".

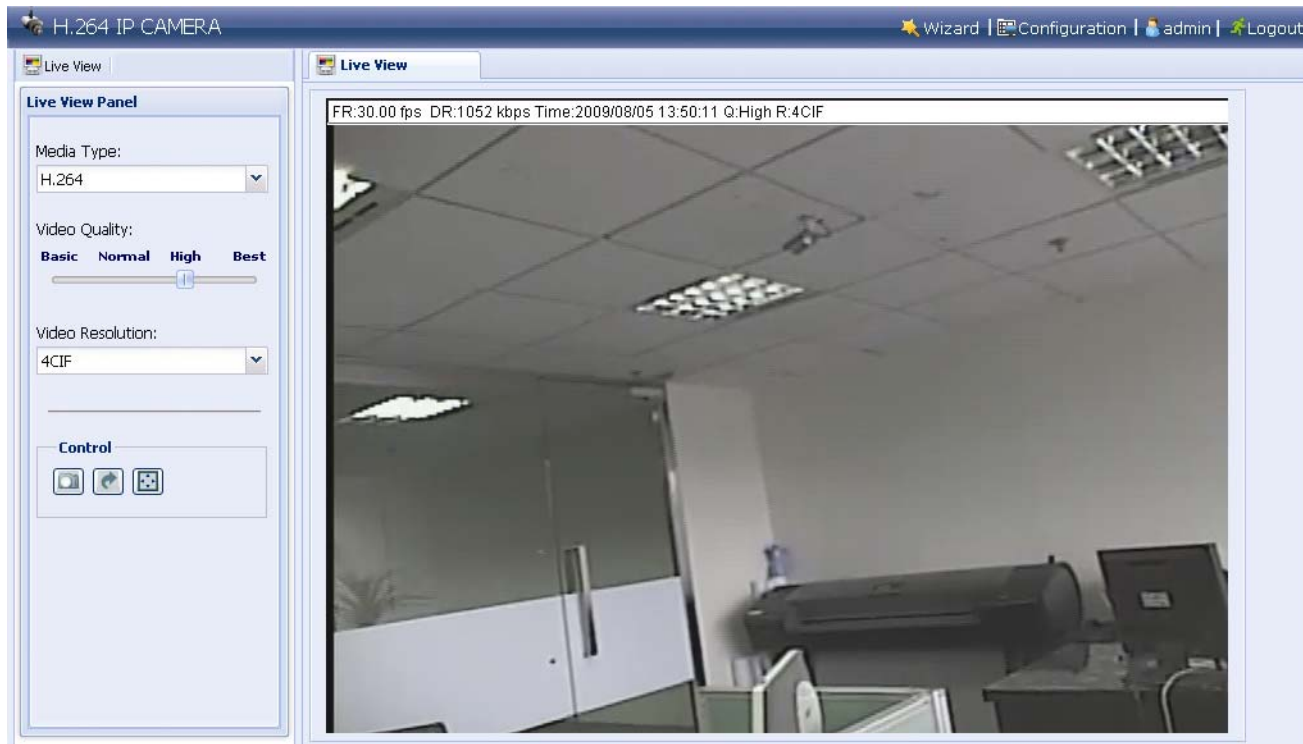

Step3: The wizard is then starting analyzing your network environment, and shows your network environment.

- To continue setting the password, date & time, and network, click "Next" and follow the step-by-step instructions.
- To skip the wizard and directly access the camera live view, click "Close".
- To directly access the camera live view without starting the wizard for the login next time, check "Do not start wizard at login".

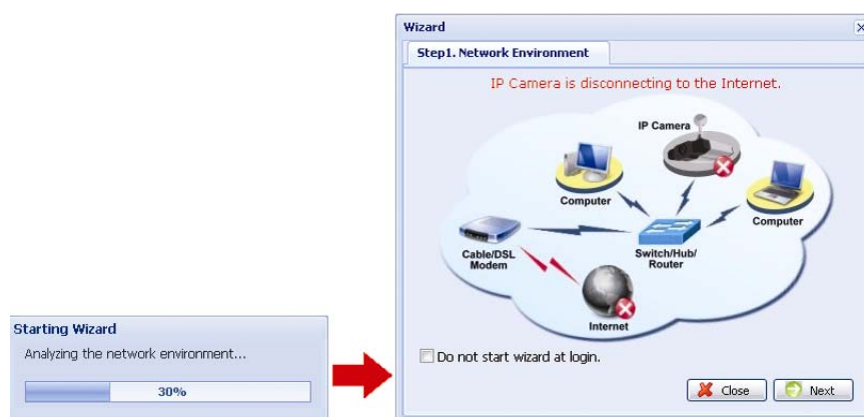

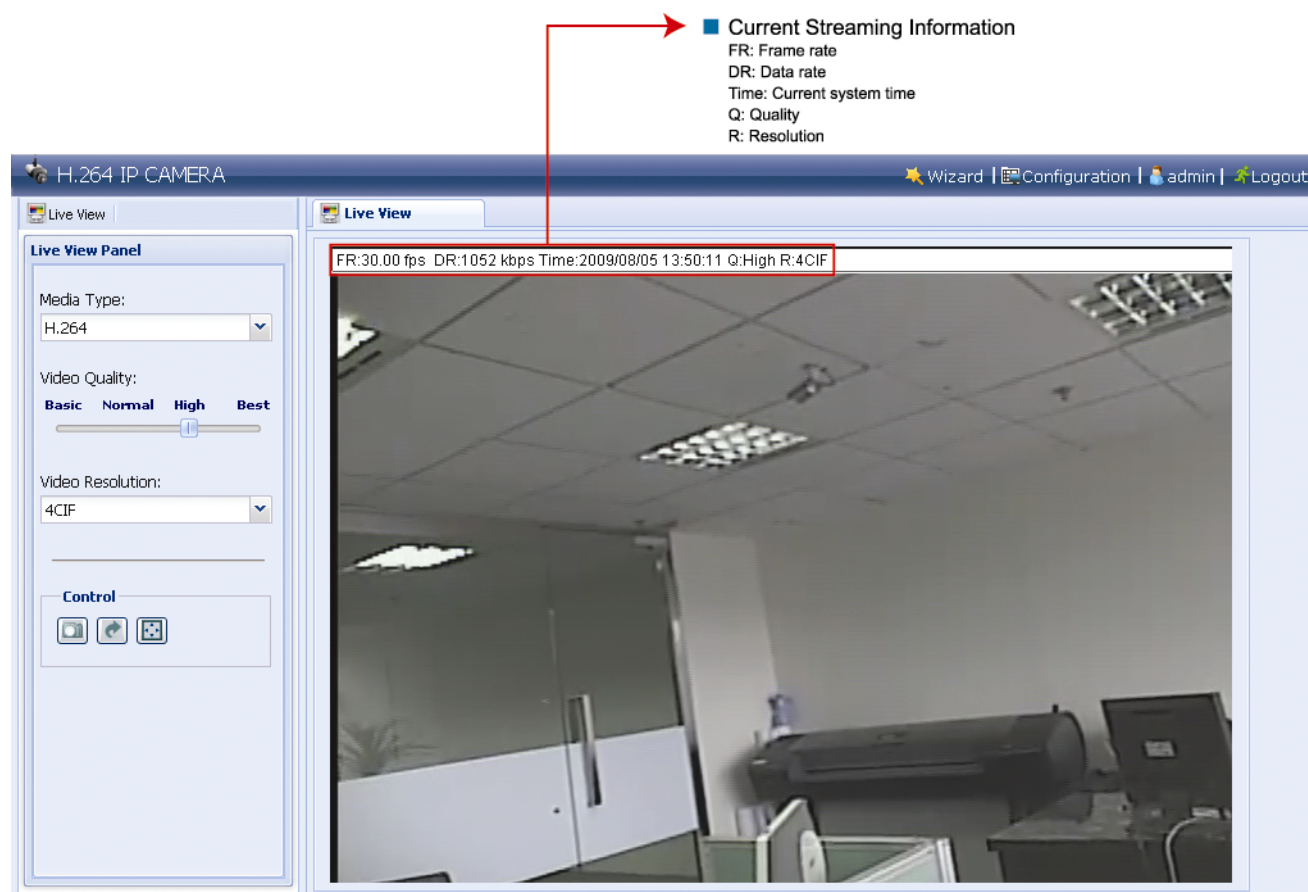

Step3: When the login is successful, the live view is shown similar as follows.

5.2 Control panel overview

5.2.1 Live View Panel

Current Streaming Information
FR: Frame rate
DR: Data rate
Time: Current system time
Q: Quality
R: Resolution

Function	Icon	User Level	Description
Media Type	--	Supervisor / Power User / Normal User / Guest	Select the web transmission format from the drop-down list: H.264 / MPEG-4 / Motion JPEG / QuickTime For users using Mozilla Firefox, only "QuickTime" is selectable. QuickTime is Apple Inc.'s multimedia software. You need to have QuickTime installed in you operating system before selecting "QuickTime". When it is selected, you will be promoted to enter the user name and password to access the camera.
Video Quality	--	Supervisor / Power User / Normal User	Click & drag the slider to select the video quality: Basic / Normal / High / Best.
Video Resolution		Supervisor / Power User / Normal User	Select the video resolution from the drop list: 4CIF / CIF.

			captured image.
Flip		Supervisor / Power User / Normal User	Click to rotate the image 180^0 counterclockwise when necessary.
Full Screen		Supervisor / Power User / Normal User	Click to display the image in full screen.

5.2.2 System Configuration Panel

Click "Configuration" to enter the configuration page.

Note: You need to be the supervisor to enter the system configuration page. If not, please re-log into the camera with the supervisor user level.

The functions are categorized into three menus: Network, Camera and General.

■ For details about "Network", please refer to "4.2 Network" at page 15.

■ For details about "Camera", please refer to "4.4 Camera' at page 18.

■ For details about "General", please refer to "4.1 General" at page 12, and "4.3 Video" at page 18.

Main Menu	Sub-menu	Reference

	Account	→ Remote Config → General → Account
	Trigger	→ Remote Config → General → Trigger
	Video	→ Remote Config → Video
	Google Maps	Allows you to know where the network camera is. The system will prompt you to apply a Goole Maps Key if your access is denied. Please follow the instructions below when you're denied: 1. Click "Sign up for a Google Maps key" to enter the application page. 2. Check the terms and conditions, and enter the IP address of the network camera. Then, click "Generate API Key". 3. Copy the generated API key, and click "Update Google Maps Key" on the web browser to paste it.
	Upgrade	→ . For details, please refer to "3.3.3 Firmware Upgrade" at page 6.

6. ACCESSING THE CAMERA VIA YOUR MOBILE PHONE

6.1 Checklist Before Using

Make sure your PDA or mobile phone conform to the following requirements:

Device	Make sure …
WinCE-Based PDA	The operating system is Windows Mobile 5.0 Packet PC / 6.0 Professional*. Windows Mobile 5.0 Smartphone / 6.0 Standard is NOT supported.
	J2ME MIDP2.0 is supported.
	Internet services via Wireless or GPRS / 3G networks are subscribed and available to use. For details, please check with your local network operator or service provider.
J2ME-Based Mobile Phone	J2ME is supported.
	Internet services via GPRS / 3G networks are subscribed and available to use. For details, please check with your local network operator or service provider.
	The port number of the connected device is NOT 80. The suggested port number is 88.
iPhone	Internet services via 3G networks are subscribed and available to use. For details, please check with your local network operator or service provider.
	Your mobile phone is available to access "App Store".

* We do not guarantee the compatibility of the mobile surveillance software in every touch panel PDA brand with the operating system of Windows
Mobile 5 Packet PC / 6.0 Professional. Please check with your distributor for details.

6.2 Program Download / Installation

6.2.1 For iPhone

STEP1: Go to "App Store" via your iPhone, and search our program with one of the following keywords: EagleEyes / PTZ / IPCAM / Surveillance.

Note: You might be charged for Internet access via wireless or 3G networks. For the Internet access rate details, please check with your local network operator or service provider.

STEP2: Follow the on-screen instructions to download and install the program.

"   " will be shown on the iPhone desktop for quick access when the program is installed successfully.

6.2.2 For WinCE- & J2ME-Based Mobile Phone

STEP1: To download the program for mobile surveillance, please visit the following website address from your PDA or mobile phones:

http://211.75.84.102/fae/MobileAP/index.html

Note: The Internet access setting via wireless or GPRS / 3G networks varies depending on different PDA or mobile phone brand. For details, please refer to its individual user manual, or check with your local network operator or service provider.

Note: You might be charged for Internet access via wireless or GPRS / 3G networks. For the Internet access rate details, please check with your local network operator or service provider.

You will see the following four programs available:
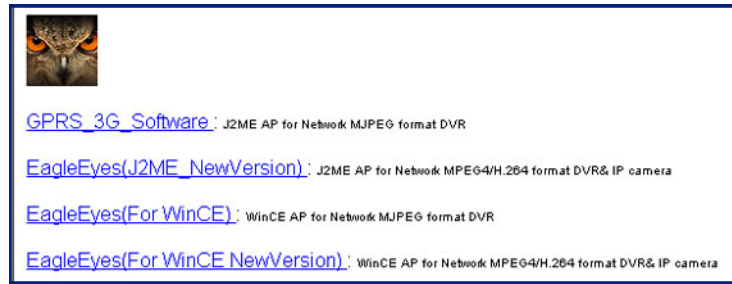

STEP2: Download the program as instructed:

> Select "**EagleEyes (J2ME New version)**" if you're using the J2ME-based mobile phone.

> Select "**EagleEyes (For WinCE New Version)**" if you're using the WinCE-Based PDA phone.

STEP3: Follow the on-screen instructions after downloading.

For mobile phones, the program will be saved to the location you specified.
For WinCE-Based PDA, the program will be saved to "Programs".

6.3 Program Setup

STEP1: Get the necessary information for accessing your network camera, such as the IP address, user name, password, port number, etc.

STEP2: Activate the program, and go to its setting page to fill in the information needed.

STEP3: Try to access your network camera to see if the connection works.

APPENDIX PRODUCT SPECIFICATIONS

■ Network	
Network Compression	H.264
LAN Port	YES
LAN Speed	10/100 Based-T Ethernet
Supported Protocols	DDNS, PPPoE, DHCP, NTP, SNTP, TCP/IP, ICMP, SMTP, FTP, HTTP, RTP, RTSP
Frame Rate	NTSC:30, PAL:25
Number of Online Users	10
Security	Multiple user access levels with password
Web management	(1) Web browsers, such as Internet Explorer or Mozilla FireFox, for single device access, or (2) Free CMS software, Video Viewer, for up to 16 network cameras control simultaneously
■ Camera	
Image Sensor	1/3" HR color CCD image sensor
Pixels	768(H) x 494(V) <NTSC> / 752(H) x 582(V)) <PAL>
Min Illumination	0.05 Lux / F1.4, 0 Lux (IR ON)
Shutter Speed	1 / 60 (1/50) to 1 / 100,000 sec.
S/N Ratio	More than 48dB (AGC off)
Lens	f6.0mm
Viewing Angle	48°
IR LED	56 units
IR Effective Range	Up to 40 meters
Smart Light Control	YES
White Balance	ATW
AGC	Auto
IRIS Mode	AES
IP Rating	IP67
Power Source (±10%)	DC12V / 1.5A
Operating Temperature	-10℃~40℃
Dimensions (mm)**	282.4(L) x 115.6(W) x 212.63(H)
■ Others	
Mobile Surveillance	iPhone, BlackBerry, J2ME & WinCE
Motion Detection	YES
Alarm and event Notification	By FTP and Email
Minimum Web Browsing Requirements	Pentium 4 CPU 1.3 GHz or higher, or equivalent AMD 256 MB RAM AGP graphics card, Direct Draw, 32MB RAM Windows Vista, XP, Windows 2000 Server, ME, 98, DirectX 9.0 or later Internet Explorer 6.x or later

** The specifications are subject to change without notice.

** Dimensional tolerance: ± 5mm
